

Sales Model & Pricing Explanation

CodeFlow is sold as a city-specific municipal workflow system: questionnaire, source review, exact setup + monthly quote, SOW/payment, private city account activation, and ongoing Operations+ maintenance.

\$20,000

PALM BEACH GARDENS
TARGET SETUP

\$10,000/mo

BASELINE TARGET
SUBSCRIPTION

\$12,000/mo

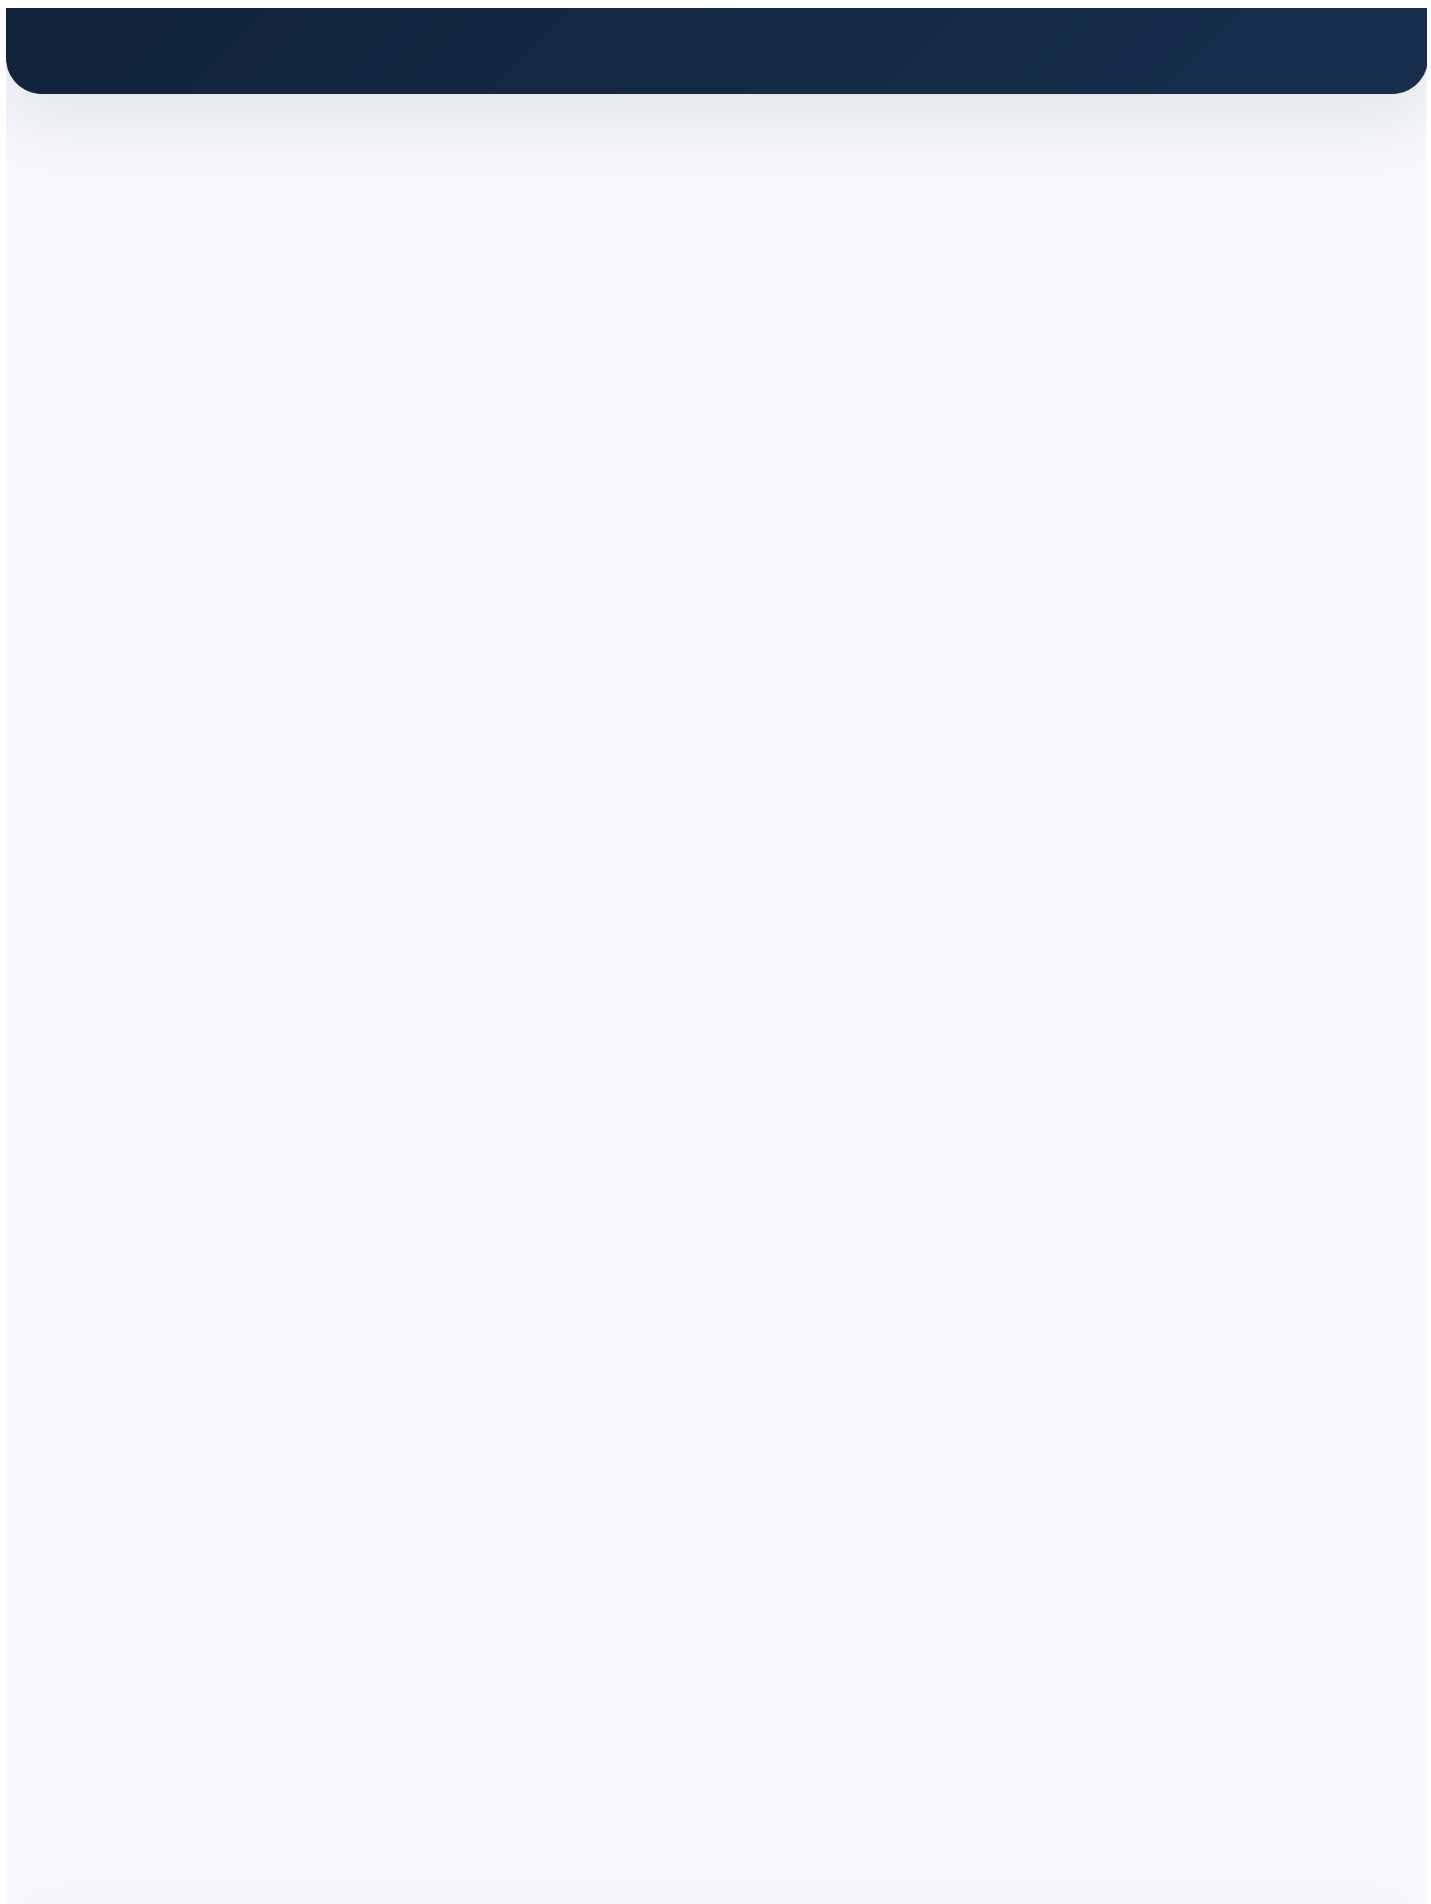

OPERATIONS+ MANAGED
PACKAGE

Commercial position

Palm Beach Gardens-class buyers are framed as mid-size / multi-department Operations+ deployments. The monthly fee covers a maintained city workflow layer, not just software access.

Authority boundary

Staff-final-review-only. CodeFlow suggests, assembles, flags, and drafts. Authorized city staff verifies, edits, approves, and enters or attaches final material in the official system.

BUYER PATH

The clean sales model

1. Questionnaire

The city or department fills out a scope questionnaire so Kyber can identify source complexity, departments, staff roles, case volume, and procurement constraints.

2. Source review

The buyer provides official code links, ordinance PDFs, GIS/parcel/property sources, workflows, forms, records paths, and templates.

3. Exact quote

Kyber confirms the setup, monthly subscription, optional training/travel, timeline, inclusions, exclusions, and contract/payment path.

4. Build + launch

After SOW/payment approval, Kyber builds the private account, City Pack, staff roles, review gates, packet templates, and QA path.

Positioning correction: Do not lead with a separate paid pilot. Default to setup + monthly. If an evaluation is required, frame it as scoped setup / limited first-month use credited toward production setup.

What setup covers

- Private city/department account provisioning.
- City Pack buildout from official codes, ordinances, maps, parcel/property, and workflows.
- Staff accounts, roles, permissions, and review gates.
- Review-ready packet template configuration.

- Manual export process or scoped integration review.
- Municipal system-stack mapping.
- Launch QA, onboarding, and handoff.
- Initial staff-final-review workflow configuration.

What monthly covers

Access, hosting, usage, support

Continued use of the private CodeFlow account, hosted backend, user access, case/packet workflow, AI processing, storage,

City Pack maintenance

Ongoing updates to official source mappings, workflows, templates, staff-review configuration, source confidence, and

admin support, workflow QA, and issue resolution.

export/readiness posture as the account evolves.

PALM BEACH GARDENS PRICING

\$20,000

SETUP / CITY PACK
IMPLEMENTATION

\$10,000/mo

BASELINE SUBSCRIPTION

\$12,000/mo

OPERATIONS+
SUBSCRIPTION

Buyer-facing anchor: For Palm Beach Gardens-class, mid-size / multi-department deployments, lead with **\$20,000 setup + \$10,000/mo baseline**. Use **\$12,000/mo Operations+** when the package includes all managed premium layers and quarterly source/workflow reviews.

Package	Setup	Monthly	When to use
Baseline CodeFlow deployment	\$20,000	\$10,000/mo	Private city account, City Pack, staff roles, review gates, packet workflow, source mapping, onboarding, and support.
CodeFlow Municipal Operations+	\$20,000	\$12,000/mo	Baseline plus City Pack source maintenance/versioning, mobile field workflow, packet PDF export, management dashboard, public-records/export readiness, role-based review gates, city system-stack mapping, and quarterly source/workflow reviews.

Final quote can still move with departments, staff count, training, export/integration posture, procurement requirements, security review, and data-retention obligations. Do not show lower legacy portal language on buyer-facing assets.

What makes the \$12,000/mo Operations+ package defensible

Operations+ turns the subscription into a maintained municipal workflow service rather than a passive portal.

City Pack source maintenance/versioning

Official-source links, code references, templates, source confidence, and version history stay visible and reviewable.

Mobile field workflow

Inspectors capture notes, photos, location, issue family, and staff observations into a review queue.

Packet PDF export

Packets assemble property blocks, evidence, possible code sections, source notes, staff checks, and review trail.

Management dashboard

Supervisors see case queue health, packet/export counts, source gaps, stale sources, bottlenecks, and activity.

Public-records/export readiness

Exports include citation posture, redaction-needed flags, records-custodian review language, and export history.

Role-based review gates

Field capture, draft review, parcel/owner verification, code review, supervisor review, records review, and packet-ready gates.

City system-stack mapping

Tyler/EnerGov, MGO, Accela, OpenGov, GIS, PAPA/property, permitting, records, and export posture are mapped without false integration claims.

Quarterly source/workflow reviews

Kyber reviews source drift, template updates, bottlenecks, system-stack changes, and improvement recommendations.

Plain-English line: "The city does not adapt to CodeFlow. CodeFlow adapts to the city."

GUARDRAILS

What this is — and what it is not

Say this

- CodeFlow prepares review-ready municipal workflow intelligence.
- City staff retains final review and official process authority.
- The City Pack adapts to the municipality's official sources, workflow, staff roles, and export path.
- The monthly fee covers maintained sources, workflow QA, support, and Operations+ review.

Do not say this

- The AI enforces code.
- CodeFlow replaces the city's system of record.
- CodeFlow automatically sends official notices.
- CodeFlow gives legal advice.
- CodeFlow integrates with every incumbent system without city-specific verification.

Contract/payment note: Stripe Checkout or invoice is only the payment rail. Municipal sale should be paired with SOW/MSA/PO or city-approved services agreement before production activation.

Recommended Palm Beach Gardens close line

"For Palm Beach Gardens, we would frame this as a mid-size / multi-department Operations+ deployment: \$20,000 setup, \$10,000/mo baseline, and \$12,000/mo if the city wants the full managed Operations+ layer with quarterly source/workflow reviews."
